

ARES — High-Level Design

Locally-hosted incident analysis. Nothing leaves the machine.

INPUT

Windows event logs

Sysmon JSON · untrusted input

ARES CORE

Deterministic verifier

Finds and proves every link
VERIFIED · REFUTED · APORIA

Cannot be overridden

only proven
links

Local AI model

Picks which proven links
are the attack

Advisory only

STORAGE

SQLite

Proven facts only.
Model picks kept apart. Never badged.

OUTPUT

Dashboard

127.0.0.1 · read-only

Reports

Markdown · I

The model can be wrong about what matters. It cannot make the tool assert something false.
